## Universal Analogue Input Configurable Trip Amplifier with display

DAT 5028
Phone: +1 5617795660 E-mail : Info@datexel.com - Web Site www.datexel.com

## FEATURES

- Universal Analogue Input
- Relay Outputs: 2 SPDT + 2 SPST (version with 4
thresholds)
- Relay Outputs: 2 SPDT (version with 2 thresholds)
- 1 V/mA Analogue Output for signal transmission
- 1500 Vac galvanic isolation on all ways
- High Accuracy
- EMC compliance - CE Mark
- DIN rail suitable mounting (EN-50022)

## GENERAL DESCRIPTION

The DAT 5028 device is able to acquire RTD or Tc sensors, $\mathrm{mV}, \mathrm{V}$ or mA input signals connected to the universal analogue input. By means of push-button and 4-digit display on the front panel, four different trip alarms are configurable. Each alarm threshold commands an output relay. Input signal can be retransmitted on the analogue output in a Voltage or Current signal, configurable by means of dip-switch on the side of the device.
By means of an internal 16 bit converter, the device guarantee a high accuracy and a stable measure versus time and temperature.
The 1500 Vac isolation on all ways removes eventual ground-loop effects, allowing the use of the device even in the heavy environmental conditions.
In function of the number of thresholds necessary to the user, the device can be supplied in two different versions:
DAT5028-4 with 4 thresholds (2 SPDT + 2 SPST);
DAT5028-2 con with 2 thresholds (2 SPDT).
The device is housed in a rough self-extinguishing plastic container which, thanks to its thin profile of 22.5 mm only, allows a high density mounting on EN-50022 standard DIN rail.

## USER INSTRUCTIONS

Before to install the device, please read the "Installation Instruction" section.
Connect power supply, analogue input, relay outputs and analogue output as shown in the "Wiring" section.
In normal conditions, the display must always show a value.
To simplify handling or replacing of the device, it is possible to change configuration or remove the wired terminals even with the device powered.

TECHNICAL SPECIFICATIONS (Typical @ $25^{\circ} \mathrm{C}$ and in the nominal conditions)

## TRIP OPERATION MODE

The relay goes on when the input signal is higher than the set－point level for at least the delay time＂t on＂（ms）．The relay goes off only when the input signal is lower than the hysteresis value for at least delay time．

## INSTALLATION INSTRUCTIONS

The device is suitable for fitting to DIN rails in the vertical position．
For optimum operation and long life follow these instructions：
When the devices are installed side by side it may be necessary to separate them by at least $\mathbf{5} \mathbf{~ m m}$ in the following case：
－If panel temperature exceeds $45^{\circ} \mathrm{C}$ and at least one of the overload
conditions exist．
Make sure that sufficient air flow is provided for the device avoiding to place raceways or other objects which could obstruct the ventilation slits．Moreover it is suggested to avoid that devices are mounted above appliances generating heat；their ideal place should be in the lower part of the panel．
Install the device in a place without vibrations．
Moreover it is suggested to avoid routing conductors near power signal cables（motors，induction ovens，inverters etc．．．）and to use shielded cable for connecting signals．

## CONFIGURATION OVERVIEW

The configuration of the device, can be controlled by means of the push buttons and the 4-digit display on the front side of the device.
In normal operation, the display shows the actual value of the analog input.
To enter in the view mode, follow the next procedure:

1) press the "ESC" button : it will be displayed the label "In"
2) press the "ESC" button again, it will be displayed the input type value (see tab.4).
3) Keep to press the "ESC" button to visualize all of the setting values of the device (follow the next list:

| $\underbrace{E S C}_{\text {Un }}$ | TAB. 4 - Input Type |  |
| :---: | :---: | :---: |
| $\checkmark$ ESC | 100 mV | 1 |
| $\downarrow$ ESC | 10 V | 2 |
| "1 LO" | 20 mA | 3 |
| Shows Low Set-point of the $1^{\text {st }}$ threshold | Tc J | 4 |
| "1 HI" | Tc K | 5 |
| $\downarrow$ ESC | Tc R | 6 |
| Shows High Set-point of the ${ }^{1 \text { st }}$ threshold ESC | Tc S | 7 |
| "2 LO" | Tc T | 8 |

Shows High Set-point of the $4^{\text {th }}$ threshold
$\downarrow$ ESC
"In L"
$\downarrow$ ESC
Shows Low value of the input range
$\downarrow$ ESC
"In H"
Shows High value of the input range
$\downarrow$ ESC
"OutL"
Shows Low value of the output range
"OutH"
$\downarrow$ ESC
Shows High value of the output range
"Out"
$\downarrow$ ESC
Shows Output type ( $0=$ current, $1=$ voltage )
$\downarrow$ ES
"t on"
$\perp$ ESC
Shows the delay time for the thresholds
"t 0"
$\downarrow$ ESC
Shows the initial delay time at the power-on」 ESC
4) To exit from the view mode don't press any button for 5 second: the device will automatically visualize the actual input measure.

## THRESHOLD CONFIGURATION

To configure the threshold values press both the buttons ("SET"+"ESC") for at least 5 seconds.

1) Press the button "ESC" to scroll through to the list until the desired parameter to be configured appears.
2) Press the button "SET" to confirm the selection of the parameter; the display shows the value currently programmed.
3) Press the button "UP" or "DOWN" to modify the value: keeping pressed the button "UP" or "DOWN" to increase the speed of variation of the numbers.
4) When the desired value has been reached press both the buttons for at least 4 seconds. Don't press any button for 5 second to discard the changes.

5) Repeat the step from 1 up to 4 for each parameter to configure.

To exit from the threshold configuration don't press any button for 5 second: the device will automatically visualize the actual input measure in function of the programming performed.

Note: the relay 2 and 3 are available only for the version with 4 thresholds (DAT5028-4)
ANALOGUE OUTPUT

LIGHT SIGNALLING

| LED | COLOR | STATE | DESCRIPTION |
| :--- | :--- | :--- | :--- |

## HOW TO ORDER

DAT 5028 can be supplied with the configuration specified by the customer.
It is necessary to specify the number of necessary thresholds ( 2 or 4 ).
Refer to the "Technical Specification" section for the output type available.
ORDER CODE EXAMPLE:
DAT 5028-2
Number of thresholds : DAT 5028-2 (2 SPDT relay) DAT 5028-4 (2 SPDT relay + 2 SPST relay)

MECHANICAL DIMENSIONS (mm)

[^0]:    1) referred to input span (difference between Val. max. and Val. min.); (2) referred to output span (difference between Val. max. and Val. min.)
